FOR IMMEDIATE RELEASE

## **Apposite Releases Linktropy Version 1.1**

### *Statistics Monitor and Routing Functionality Enhance Easy-to-Use WAN Emulator*

Los Angeles, CA (June 1, 2006) Apposite™ Technologies, Inc. today announced the release of version 1.1 of the Linktropy™ 4500, the company's high-precision, easy-to-use, WAN emulation appliance. The new firmware adds a traffic statistics monitor to view live transmission statistics and throughput graphs, as well as IP routing capabilities to allow the Linktropy 4500 to be installed as either a router or bridge.

The Linktropy 4500 simulates WAN bandwidth, delay, packet loss and other conditions to emulate terrestrial, wireless, internet, satellite and other wide-area networks. An intuitive, browser-based interface makes it easy to test application and equipment performance under a variety of real-world conditions. With prices starting at \$2500, the Linktropy 4500 combines unmatched precision and ease-of-use in an economical package.

The new features of version 1.1 include:

- **Monitor**  
A new traffic statistics monitor provides a visual display of the current traffic conditions, including throughput graphs, and transmission and loss statistics. The statistics history can also be downloaded to a file for analysis.
- **IP Routing**  
Version 1.1 adds IP routing capabilities to allow the Linktropy 4500 to be configured as either a router or a bridge, making it easy to install the Linktropy 4500 into a broad range of network architectures.
- **Management access through LAN A/B**  
A new option allows the Linktropy 4500 to be managed through the LAN A or LAN B ports instead of the MGMT port, making it easy to build test networks for customer demonstrations and trade shows with a minimum of equipment.

Version 1.1 will begin shipping immediately with all new Linktropy 4500 purchases. Customers under a current support contract can upgrade to version 1.1 at no additional charge.

## **About Apposite Technologies**

Apposite Technologies makes WAN emulation easy by offering highly precise network test tools at reasonable prices. Apposite emphasizes ease-of-use so engineers spend time using the tools, not learning them. Apposite's Linktropy 4500 WAN emulator simulates bandwidth, latency, loss, and other network characteristics to provide accurate network simulations for terrestrial, wireless, satellite, internet or any other type of wide-area network. *Apposite Technologies – WAN Emulation Made Easy.*
