FOR IMMEDIATE RELEASE

## **Apposite Technologies Announces Distribution Agreement with Digital Hands GmbH**

### *Digital Hands to Distribute Apposite's Linktropy WAN Emulation Products*

Los Angeles, CA (July 11, 2007) — Apposite™ Technologies, Inc. today announced the appointment of Digital Hands GmbH as the distributor of its Linktropy WAN emulation products in Germany and Austria. In addition, Digital Hands will introduce the Linktropy products to users across portions of Western and Eastern Europe through its network of partners and resellers.

Linktropy WAN emulators simulate network bandwidth, delay, packet loss, congestion, and other important link impairments to emulate any type of wide area network in a lab environment. The Linktropy WAN emulation appliances are reasonably priced and designed for ease of use, with an intuitive, browser-based user interface. Linktropy WAN emulators are used by network managers, software developers, networking equipment manufacturers, telecoms carriers, test labs, and military and government network designers.

“We like the way Apposite works together with us – flexible, committed, and highly proactive,” said Thomas Fink, Managing Director of Digital Hands. “The Linktropy products are best in class and offer an incredible value for the features and performance. We foresee great success for Apposite in Europe.”

“We were impressed with Digital Hands’ extensive experience and deep knowledge of the networking industry,” said DC Palter, Apposite President. “We look forward to working with Digital Hands to make the Linktropy products as easy to purchase for users in Germany and Austria as they are to use.”

The agreement between Apposite Technologies and Digital Hands is effective immediately. For more information on Linktropy products, users in the region can contact Digital Hands at +49.6103.270.265 or by email to mail@digital-hands.eu.

### **About Apposite Technologies**

Apposite Technologies makes WAN emulation easy by offering high-precision network emulation tools at reasonable prices. Apposite emphasizes ease-of-use so engineers spend time using the tools, not learning them. Apposite's Linktropy 4500 and Linktropy 7500 WAN emulation appliances simulate bandwidth, latency, loss, and other network characteristics up to 1 Gbps with fine-grained precision to provide accurate simulations of terrestrial, wireless, satellite, internet or any other type of wide-area network. *Apposite Technologies – WAN Emulation Made Easy.*
