Apposite Technologies makes it easy to test the performance of applications over the wide-area network by offering high-precision network emulation appliances with unmatched ease-of-use.

Apposite's Netropy network emulators offer advanced capabilities to benchmark, troubleshoot, and optimize the performance of critical applications. Netropy's unique, high-performance Emulation Engine enables high-precision emulation of up to 15 separate WAN links to model complex network topologies or run multiple concurrent tests.

Each link is configured with its own bandwidth, latency, loss and other properties. Packets can be assigned to the appropriate link by IP address range, VLAN, application port number, or any other packet identifier.

Netropy models are available with up to 4 separate Emulation Engines per unit, and capacities up to 100 Gbps. Netropy is also available in a software version, NetropyVE, that runs as a virtual machine in virtual test environments.

Netropy network emulators are configured and managed through an intuitive, browser-based interface for easy operation, or through a comprehensive command line interface for integration with test automation tools.
TERRESTRIAL WIRELESS SATELLITE INTERNET

Tuning: Adjust application settings to optimize performance for different end users.

Optimization: Analyze the benefits of WAN acceleration and SD-WAN products to optimize the existing infrastructure.

Troubleshooting: Pinpoint the cause of reported problems and complaints, then validate potential solutions without disrupting the production network.

FEATURES

Easy to Use: Netropy network emulators are quick to install, intuitive to configure, and easy to operate. The Netropy GUI provides the responsiveness of an application with the convenience of a standard web browser.

Multiple Links: Simulate up to 15 separate WAN links through each Emulation Engine.

Packet filtering: Assign packets to different links by IP address, VLAN, or any other packet identifier.

Bandwidths up to 100 Gbps: Accurately simulate links from 100 bits per second up to 100 Gbps.

Latency up to 20 sec.: Emulate delay and jitter of 10 seconds or more in each direction, in increments of 0.01 ms.

Flexible interfaces: The N61 and N91 are available with copper or SFP ports. The 10G1 and 10G2 offer 1/10 Gbps dual rate SFP+ ports for easy integration into 1 or 10 Gbps networks.

Loss & Corruption: Set random, burst, or periodic packet loss. Test the effect of corruption on voice and video applications.

Capture & Replay: Record the delay and loss characteristics of the production network as they vary second-by-second and replay them through the Netropy emulator.

Background Utilization: Test how applications run over a congested network without costly traffic generators or a rack full of client machines using Netropy’s unique background utilization and PCAP replay features.

Traffic Monitor: View and download up to 24 hours of throughput graphs and link statistics.

Automated Testing: Automate testing using the comprehensive command line interface.

Unsurpassed Precision: Test with confidence — the high-precision Netropy Emulation Engine ensures accurate and reproducible results.

Priced Right: Get the functionality and performance you need at a price you can afford.

Application Lifecycle Testing

Network design: Build “what-if” scenarios to choose between private lines, internet VPNs, and wireless and satellite networks to connect offices across the globe, then determine how much bandwidth to purchase to ensure critical applications perform as needed.

Application validation: See how applications perform prior to roll-out and avoid unpleasant surprises and panic fixes later.

Vendor selection: Compare products from different vendors to select the one that works best on your network.

TERRESTRIAL WIRELESS SATELLITE INTERNET
**USER INTERFACE**

**PRODUCTS**

- **Netropy N61**
  Emulate complex networks up to 1 Gbps

- **Netropy N91**
  Four separate 1 Gbps emulation engines

- **Netropy 10g1**
  Emulate links up to 10 Gbps

- **Netropy 10g2**
  Two separate 10 Gbps emulation engines

- **Netropy 10g4**
  Four separate 10 Gbps emulation engines

- **Netropy 40g**
  World’s first 40 Gbps WAN Emulator

- **Netropy 100g**
  Industry’s first 100 Gbps WAN Emulator

- **Netropy VE (Virtual Edition)**
  Software Version of 1 Gbps WAN Emulator
MULTI-LINK EMULATIONS
Each Emulation Engine can simulate up to 15 separate WAN links. Each Netropy unit contains up to 4 independent Emulation Engines, depending on the model.

Emulate multi-site networks:
Model a full enterprise network of regional, branch, and local offices, telecommuters, and partners, all connected to headquarters or a centralized datacenter.

- View applications as they will be seen by different end users
- Verify the operation of application servers with concurrent users

Side-by-side benchmarking:
Run separate tests side-by-side.

- View the effects of different conditions on application responsiveness
- Compare products from different vendors
- Tune application settings
- Analyze the benefits of acceleration and optimization products

High scalability:
Simulate thousands of separate clients for testing cloud-based applications, mobile apps and gaming.

Isolate individual applications:
Segregate traffic from different devices and apply impairments to specific applications.

Concurrent testing:
Test a matrix of conditions by running multiple emulations in parallel.

VIEW IMPACT OF NETWORK CONDITIONS

Throughput
Test bulk data applications: File transfer, network storage, remote back-up / disaster recovery

Responsiveness
Test interactive applications: File sharing (CIFS), virtual desktop (VDI), database applications, CRM, ERP, remote access, web, cloud computing, SAAS

Quality
Test real-time applications: VoIP, video, IPTV

About Apposite Technologies
Apposite Technologies makes WAN emulation easy by offering professional-quality network emulation tools at affordable prices. Apposite’s award-winning Netropy and Linktropy WAN emulation appliances simulate bandwidth, latency, loss, congestion, and other network impairments with fine-grained precision to provide accurate simulations of any type of wide-area network. Netropy and Linktropy WAN emulators are widely deployed by leading enterprises, application and equipment developers, telecoms carriers, and government and military organizations around the world. ### Emulation Capabilities

- **Packet Classification**: IP source & destination address range (IPv4 or IPv6), VLAN, TCP or UDP port number, IP ToS, MAC address, MPLS label, or any other packet contents
- **Bandwidth**: 100 bps – 100 Gbps in 1 bps increments (depending on model)
- **Delay**: 0 ms – 10,000 ms or greater in each direction in 0.01 ms increments; constant, uniform, normal distributions; replay recorded loss, accumulate & burst
- **Loss & Corruption**: random, burst, periodic, BER, Gilbert-Elliott, or recorded loss; data corruption; network outage
- **Background Utilization**: 0 – 100% in increments of 0.1%; PCAP replay
- **Queuing & Prioritization**: RED or tail drop queue management; priority or round robin queuing
- **Additional Parameters**: Packet Reordering, Packet Duplication, MTU and Fragmentation, Queue Depth, Framing Overhead

### Interfaces

- **Management**: 1 x Gigabit Ethernet, 1 x RS-232 serial console
- **Power Supply**: Single, Single, Single, Redundant, Redundant, Redundant, Redundant
- **Security**: SSL and SSH for secure management; per-user locking of engine configuration

### Warranty & Support

- **Hardware Warranty**: Hardware warranty is included with product license
- **Support & Maintenance**: Support is included with product license and software maintenance
